neuroscience fundamentals for communication sciences and disorders second edition is a comprehensive textbook primarily designed for undergraduate neural bases or graduate neuroscience courses in communication sciences and disorders programs. The text can also be used as an accessible go-to reference for speech language pathology and audiology clinical professionals practicing in medical and rehab settings. Written with an engaging and conversational style, the author uses humor and analogies to explain concepts that are often challenging for students. Complemented by more than 400 visually rich and beautifully drawn full color illustrations, the book emphasizes brain and behavior relationships while also ensuring coverage of essential neuroanatomy and neurophysiology in an integrative fashion with a comprehensive background in the principles, processes, and structures underlying the workings of the human nervous system. Students and practitioners alike will be able to better understand and apply brain-behavior relationships to make appropriate clinical assessments and treatment decisions extending well beyond traditional neuroanatomy-based textbooks. This resource is designed to satisfy three major goals: provide neuroanatomical and neurophysiological detail that meets the real-world needs of the contemporary student as they move forward toward clinical practice and into the future where advancements in the field of health and brain sciences are accelerating and contributing more and more each day to all areas of rehabilitation; provide clear, understandable explanations and intuitive material that explains how and why neuroanatomical systems, processes, and mechanisms of the nervous system operate as they do during human behavior; provide a depth and scope of material that will allow the reader to better understand and appreciate a wide range of evidence-based literature related to behavior, cognition, emotion, language, and sensory perception areas that all directly impact treatment decisions. New to the second edition: 40 new full color illustrations, reorganization, and division of

content from chapters 4 5 and 6 of the previous edition into six new and more digestible chapters a new standalone chapter on the cranial nerves addition of a major section and discussion on the neural bases of swallowing addition of more summary tables and process flowcharts to simplify the text and provide ready made study materials for students revisions to most figures to improve their clarity and coherence with the written material disclaimer please note that ancillary content such as documents audio and video etc may not be included as published in the original print version of this book

why is american politics so intense and emotionally competitive today and how did we get here in the fundamental voter john h aldrich suhyen bae and bailey k sanders explain why the notion that we are divided into tribal loyalties is at best only partially correct and discuss how the divisions rest on much more substantive politics than they once did in the 1950s and 1960s the american public based voting primarily on partisan loyalties landslide presidential elections were once common but over the last forty years they have converged to very closely contested elections congressional elections were increasingly incumbent centered before 1984 and decreasingly so afterward these changes reflect the changing nature of fundamental forces that shape the public s electoral opinions and voting behavior from a single such fundamental partisan identification the electorate now rests on five fundamental forces party ideology issues race and economics since the 1980s these fundamentals have grown increasingly important and increasingly aligned such that voters are now sorted into two increasingly bitterly divided sides believing that the other side is on the wrong side of nearly everything of political relevance voters like officials have come to deeply dislike the opposition a state of affairs that threatens to undermine the stability of democratic institutions in the united states

this paper analyzes the behavior of gross capital inflows across 34 emerging markets ems we first confirm that aggregate inflows to ems co move considerably we then report three findings i the aggregate co movement conceals significant heterogeneity across asset types as only bank related and portfolio bond and equity inflows do co move ii while global push factors in advanced economies mostly explain the common dynamics their relative importance varies by type of flow and iii the sensitivity to common dynamics varies significantly across borrower countries with market structure characteristics especially the composition of the foreign investor base and the level of liquidity rather than borrower country s institutional fundamentals

strongly affecting sensitivities countries relying more on international funds and global banks are found to be more sensitive to push factors our findings suggest that ems need to closely monitor their lenders and investors to assess their inflow exposures to global push factors

in this second book in a series on european spatial planning the authors examine territorial cohesion as a successor concept to the european spatial development perspective fundamental ideas about europe and its distinct

model of society lie behind the concept of territorial cohesion which can be understood as a goal of spatial equity that tends to favor development in place over selective migration to locations of greater opportunity this approach contrasts with an american social model that views the equity principle behind territorial cohesion to be diametrically opposed to the efficiency principle based on free mobility of labor
