for more than 40 years computerworld has been the leading source of technology news and information for it influencers

worldwide computerworld's award winning site computerworld.com twice monthly publication focused conference series and custom research form the hub of the world's largest global it media network

the inspection process is one of the most important steps in manufacturing industries because it safeguards high quality products and customer satisfaction manual inspection may not provide the desired accuracy this book introduces and implements a new methodology and develops the supporting technologies for automated inspection planning based on computer aided design cad models it also provides and implements an efficient link for automated operation based on coordinate measuring machine cmm the link's output is a dmis code programming file based on the inspection planning table that is executed on cmm

dimensional metrology is an essential part of modern manufacturing technologies but the basic theories and measurement methods are no longer sufficient for today's digitized systems the information exchange between the software components of a dimensional metrology system not only costs a great deal of money but also causes the entire system to lose data integrity information modeling for interoperable dimensional metrology analyzes interoperability issues in dimensional metrology systems and describes information modeling techniques it discusses new approaches and data models for solving interoperability problems as well as introducing process activities existing and emerging data models and the key technologies of dimensional metrology systems written for researchers in industry and academia as well as advanced undergraduate and postgraduate students this book gives both an overview and an in depth understanding of complete dimensional metrology systems by covering in detail the theory and main content techniques and methods used in dimensional metrology systems information modeling for interoperable dimensional metrology enables readers to solve real world dimensional measurement problems in modern dimensional metrology practices

the impact of the technology of computer aided design and manufacturing in automobile engineering marine engineering and aerospace engineering has been tremendous using computers in manufacturing is receiving particular prominence as industries seek to improve product quality increase productivity and to reduce inventory costs therefore the emphasis has been attributed to the subject of cad and its integration with cam designed as a textbook for the undergraduate students of mechanical engineering production engineering and industrial engineering it provides a description of both the hardware and

software of cad cam systems the coverage includes principles of interactive computer graphics wireframe surface and solid modelling finite element modelling and analysis nc part programming and computer aided part programming machine vision systems robot technology and automated guided vehicles flexible manufacturing systems computer integrated manufacturing artificial intelligence and expert systems communication systems in manufacturing pedagogical features cnc program examples and apt program examples review questions at the end of every chapter a comprehensive glossary a question bank at the end of the chapters

the goal of today's industrial facility is to exceed their customers expectations for quality in the products they produce and the foundation for meeting that goal is the measurements or control of the measurements system used to determine the status of the quality this book examines what national and international standards actually say and don't say about the application and control of inspection measurement and test equipment in easy to follow detail it discusses how to build a strong system that meets both the letter and the intent of these standards by designing developing implementing and maintaining an inspection measurement and test equipment control system as required to achieve and sustain iso qs or ts certification

includes subject agency and budget indexes

this book is divided into three elements part i provides a broad introduction to the foundations of computer music instruments covering some key points in digital signal processing with rigorous but approachable mathematics and programming examples as well as an overview of development environments for computer instruments in part ii the author presents synthesis and processing with chapters on source filter models summation formulae feedback and adaptive systems granular methods and frequency domain techniques in part iii he explains application development approaches in particular communication protocols and user interfaces and computer music platforms all elements are fully illustrated with programming examples using csound python and faust the book is suitable for advanced undergraduate and postgraduate students in music and signal processing and for practitioners and researchers

this series deals with the worldwide economic effects of automation on manufacturing processes robotics and manufacturing

is an exhaustive source of scientific and technical progress by top international researchers its contents are invaluable for tracking the trends and directions of this important field unrivaled in its complete and far ranging coverage these volumes are packed with the highest quality research covering robot kinematics dynamics analysis and design sensing and sensors robot control parallel and redundant robots telerobotics and space applications of robots flexible and mobile robots fuzzy logic applications in robots and manufacturing intelligent systems and intelligent manufacturing design and economics of manufacturing systems
